Abstracts

Gas fired infrared heaters are heating devices that utilize natural gas or propane combustion to generate infrared radiation, which directly warms objects, surfaces, and people within a targeted area rather than heating the surrounding air. These systems are characterized by their energy efficiency, rapid heat transfer, and suitability for large or poorly insulated spaces such as warehouses, manufacturing facilities, sports complexes, and agricultural buildings. Operating through either tube-based or ceramic burner technologies, they provide zonal heating solutions that reduce operational costs compared to conventional forced-air systems by minimizing heat loss and enabling precise temperature control in specific zones.

The global Gas Fired Infrared Heater market size was estimated at USD 550.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
