## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Gas Hose competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global gas hose production reached approximately 185 m meter , with an average global market price of around US\$ 1500 per k meter. Gas hose is a flexible connecting pipeline specially used for conveying natural gas, liquefied petroleum gas, artificial gas and other gas fuels. It connects the fixed gas pipeline with the movable gas appliance (such as gas stove, water heater), and is the "last link" to ensure the safe transmission and distribution of gas. The annual production capacity of a single gas hose production line typically ranges from 80,000 to 100,000 meters, with a gross profit margin of approximately 25%. Downstream gas hose consumption is 38% for industrial use, 30% for commercial use, 32% for residential use.

The global Gas Hose market size was estimated at USD 278.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Gas Hose market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
