Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Gas-Insulated Surge (GIS) Arrester competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global gas-insulated (GIS) surge arresters production reached 140,000 units, with an average selling price of US\$2,051 per unit. A tank-type (GIS) surge arrester is a high-performance overvoltage protection device specifically designed for use within gas-insulated switchgear (GIS) systems. It utilizes a metal oxide (ZnO) varistor to rapidly conduct, absorb energy, and limit voltage amplitude during instantaneous lightning strikes or operational overvoltages, protecting GIS, transformers, circuit breakers, cable terminals, and other critical electrical equipment from overvoltage damage. The tank-type GIS surge arrester is directly installed inside a sealed tank filled with sulfur hexafluoride (SF₆) or an environmentally friendly mixed insulating gas (such as g₃, N₂/CO₂), forming a gas chamber structure that is either in the same chamber as the main equipment or an independent chamber. It offers significant advantages such as small size, superior insulation performance, fast response speed, high reliability, and maintenance-free operation. It is primarily used in gas-insulated switchgear (GIS) and mixed insulation systems (GIS/GIL) in substations, power plants, industrial power distribution systems, subway traction power supply, high-rise buildings, and data centers. The upstream of the industry chain includes suppliers of zinc oxide powder, ceramic matrix, aluminum flanges, epoxy insulation components, and SF₆ or alternative insulating gases; downstream customers are mainly power grid construction operators (State Grid, China Southern Power Grid, KEPCO, EDF, TenneT, etc.), large-scale power engineering EPC contractors, and high-end industrial power system users. In terms of gross profit margin, due to the complex production process and extremely high reliability requirements, manufacturers' gross profit margins are

typically between 35% and 55%, with some high-voltage or ultra-high-voltage products even reaching 60%.

The global Gas-Insulated Surge (GIS) Arrester market size was estimated at USD 287.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.20% during the forecast period.
