Abstracts

A gas insulated switch cabinet (GIS) is an advanced electrical switchgear system designed for medium to high voltage applications, utilizing sulfur hexafluoride (SF₆) or other dielectric gases as an insulating medium to control, protect, and isolate electrical equipment in power transmission and distribution networks. Distinguished from traditional air-insulated switchgear by its compact design, higher reliability, and reduced footprint, GIS encloses all live parts and interrupting units within grounded metal enclosures filled with pressurized gas, which provides superior arc-quenching properties and insulation, making it particularly suitable for urban substations, industrial complexes, and environments with space constraints or harsh atmospheric conditions.

The global Gas Insulated Switch Cabinet market size was estimated at USD 4520.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
