Abstracts

A rigid gas permeable lens, also known as RGP lens or GP lens or colloquially, hard contact lens, is a rigid contact lens made of oxygen-permeable polymers. The gas permeable (GP) contact lenses market represents a crucial segment within the broader contact lens industry, catering to individuals with specific vision correction needs, including astigmatism and presbyopia. GP lenses are known for their high oxygen permeability, allowing for healthier and more comfortable wear than traditional hard lenses. They provide clear vision, even for challenging prescriptions, and are favored for their durability and ease of maintenance. This market continues to evolve with innovations in materials and design, making GP lenses more comfortable and accessible. Leading manufacturers, such as Bausch + Lomb, CooperVision, and Menicon, are key players in developing GP contact lenses that address individual vision requirements and provide excellent eye health.
