Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Gas Permeation Membrane competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A gas permeation membrane (GPM) is a thin-film structure that utilizes the selective permeation properties of membrane materials to achieve the separation, purification, or recovery of specific gases. Its working principle is based on the differences in solubility and diffusion rates of different gases in the membrane material, allowing the target gas to preferentially pass through the membrane while other gases are blocked, thus achieving gas separation or concentration. GPMs are widely used in air separation, nitrogen production, oxygen enrichment, carbon dioxide removal, hydrogen recovery, and industrial waste gas treatment. The GPM industry chain mainly consists of three parts: upstream raw material supply, midstream membrane preparation and membrane module manufacturing, and downstream applications and system integration. Upstream provides membrane materials such as polyamide, polyester, polytetrafluoroethylene (PTFE), and hollow fiber, as well as high-precision coating and stretching equipment. Midstream membrane manufacturers and membrane module manufacturers are responsible for membrane preparation, modular packaging, performance testing, and system integration. Downstream applications cover air separation, nitrogen production, oxygen enrichment, CO₂ removal, hydrogen recovery, industrial waste gas treatment, and environmental governance, achieving gas separation, purification, and concentration through membrane systems, forming a complete industry chain. In 2024, the global production of gas permeation membranes reached 608,900 units, with an average selling price of US\$1,131 per unit. The gross profit margin of gas permeation membranes was approximately 26%, and the production capacity was 790,000 units.

The global Gas Permeation Membrane market size was estimated at USD 688.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
