Report Overview

The gas range cooker market encompasses freestanding or built-in cooking appliances that utilize natural gas or propane as their primary fuel source, combining a stovetop with burners and an oven in a single unit. These cookers are favored for their precise temperature control, rapid heating capabilities, and lower operational costs compared to electric alternatives, making them a staple in both residential and commercial kitchens. The market includes a range of product types, from basic models to high-end designs with advanced features such as convection ovens, smart connectivity, and safety enhancements like flame failure devices. Demand is influenced by factors such as urbanization, kitchen modernization trends, and the availability of gas infrastructure, with regional preferences varying based on energy affordability and cultural cooking habits. Additionally, competition from induction cooktops and environmental concerns regarding gas emissions are shaping product innovation, including the development of hybrid models and energy-efficient technologies. The market remains robust, particularly in regions with established gas distribution networks, though regulatory shifts toward cleaner energy may impact long-term growth.

The global Gas Range Cooker market size was estimated at USD 1426.57 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
