Abstracts

Gas shielded welding wires are consumable electrodes used in arc welding processes where an external shielding gas (such as argon, carbon dioxide, or a mixture of gases) is supplied to protect the molten weld pool from atmospheric contamination, ensuring high-quality, clean, and structurally sound welds with minimal spatter and porosity. These wires are typically classified based on their composition (e.g., mild steel, stainless steel, aluminum) and the specific welding process they are designed for, such as Metal Inert Gas (MIG) or Metal Active Gas (MAG) welding, and are widely utilized across industries including automotive, construction, shipbuilding, oil and gas, and heavy machinery manufacturing due to their efficiency, versatility, and ability to produce strong, reliable joints in both manual and automated welding applications.

The global Gas Shielded Welding Wires market size was estimated at USD 3840.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
