The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Gas Shrink Gun competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Gas Shrink Gun is a handheld tool commonly used in the packaging industry. It uses gas combustion to generate heat and directs hot air to the plastic film, causing the film to shrink and tightly wrap around the object, thereby achieving packaging, insulation or waterproofing. Gas heat shrink guns usually use combustible gases such as propane or butane as energy, ignite through a piezoelectric igniter, use gas pressure to transport hot air along the barrel, and guide the hot air out through the burner. It has the characteristics of adjustable temperature, convenient operation, and high packaging efficiency. It is suitable for packaging items of various sizes, especially in large items or scenarios where it is inconvenient to use fixed packaging equipment. With the development of technology, Gas Shrink Guns are becoming more ergonomic. Newer models are lighter and easier to handle, which can reduce operator fatigue and improve work efficiency. For example, some products are designed with a more comfortable grip, and the overall structure is more in line with the movement habits of the human hand. The heat efficiency of Gas Shrink Guns is constantly improving, and they are equipped with more safety features. Many products now come with integrated ignition systems and variable heat settings, which can meet different shrink - wrapping needs. At the same time, enhanced nozzles can provide a more stable air flow, ensuring better shrinkage quality. With the growth of global trade and logistics activities, the demand for reliable packaging to ensure product safety during transportation is increasing. Gas Shrink Guns can quickly and efficiently package irregularly shaped or bulky items, and are widely used in the packaging processes of automotive, machinery, chemicals, consumer goods, and other industries.
