Report Overview

The gas tube radiant heater is a type of heating system that uses a tube filled with natural gas or propane to generate heat. The gas ignites and burns, creating infrared radiation that instantly warms people and objects in the surrounding area. Unlike traditional forced-air heating systems that warm the air, gas tube radiant heaters warm surfaces directly, making them an efficient way to heat outdoor spaces, garages, warehouses, and other large areas. They are often used in commercial or industrial settings but can also be found in some residential applications. Gas tube radiant heaters come in different sizes and configurations, including ceiling-mounted or wall-mounted models, and they can be controlled by thermostats or remote controls.
