Abstracts

The gas turbine maintenance, repair, and overhaul (MRO) market in the power sector encompasses a specialized range of services focused on ensuring the operational reliability, efficiency, and longevity of gas turbines used primarily in power generation applications, including combined-cycle power plants, peaker plants, and industrial cogeneration facilities. These services are categorized into on-wing and off-wing maintenance, involving routine inspections, component repairs, hot section overhauls, blade refurbishment, combustion system upgrades, and full engine teardowns, all aimed at minimizing unplanned outages, optimizing performance, complying with emissions regulations, and extending turbine lifecycles. The market is driven by the aging global fleet of gas turbines, increasing operational hours due to grid flexibility demands, stricter environmental standards requiring technology retrofits, and the economic need to avoid capital expenditure on new units by maximizing existing asset utilization. Key activities include non-destructive testing, thermal coating applications, rotor balancing, and the integration of digital monitoring tools for predictive maintenance, with service providers ranging from original equipment manufacturers (OEMs) to independent third-party specialists competing on technical expertise, turnaround time, cost efficiency, and aftermarket support.

The global Gas Turbine Mro In Power market size was estimated at USD 21700.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
