Abstracts

Swirler is a device for converting high pressure air into high speed rotating air flow by means of ? mechanical diversion structure ? (such as blade, swirl cup or diversion hole), which is installed at the front end of the combustion chamber. Its core function is to generate controllable turbulent field and form ? low speed reflux zone ?, which provides continuous ignition source and stable combustion environment for combustion. Gas Turbine Swirler is the core component of the combustion system. It is mainly used to apply ? swirl motion ? to the air entering the combustion chamber to optimize the mixing efficiency of fuel and air, stabilize the flame and reduce the emission of pollutants.
