## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Gases for Food Cryogenic competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Gases for food cryogenic sales reached approximately 8600 tons, with an average global market price of around US\$ 170 per ton. Gases for food cryogenic applications primarily refer to cryogenic media such as liquid nitrogen (-196°C) or liquid carbon dioxide (-78.5°C), achieving rapid freezing of food products (e.g., seafood, pastries, ice cream) through direct contact or indirect heat exchange, forming micro ice crystals to preserve cellular structure and texture. The technical core lies in cryogenic gas storage, transportation, and precise spraying control. The upstream supply chain includes air separation units, gas purification systems, cryogenic storage tanks, and safety valves; the midstream involves gas liquefaction, filling, quality testing, and logistics coordination; downstream directly supplies food processing plants, cold chain logistics companies, and central kitchens, requiring strict adherence to food-grade gas standards and safety operating protocols.

The global Gases for Food Cryogenic market size was estimated at USD 1462.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
