Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Gases for Modified Atmosphere Packaging (MAPAX) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Gases for Modified Atmosphere Packaging (MAPAX) refer to food-grade gas mixtures—primarily nitrogen (N₂), carbon dioxide (CO₂), and oxygen (O₂), sometimes blended with noble gases—used to replace ambient air inside sealed food packages to slow microbial growth, reduce oxidation, and extend shelf life of fresh, chilled, and processed foods; MAPAX is a branded MAP gas solution framework (widely associated with Linde) integrating tailored gas compositions, purity standards, dosing systems, and food-safety protocols for different product categories. The MAPAX gases industry chain begins upstream with producers of industrial and food-grade nitrogen, carbon dioxide, oxygen, and specialty gases sourced from air-separation units, CO₂ recovery plants, compressors, cylinders, cryogenic tanks, and purification systems; midstream includes gas companies that blend, purify, package, and distribute MAPAX mixtures while supplying gas-mixing equipment, monitoring systems, and technical support; downstream, food processors and packaging facilities integrate MAPAX into VFFS/HFFS, tray-sealing, and vacuum-MAP lines to extend shelf life, reduce preservatives, and maintain product quality, supported by after-sales services, safety compliance (HACCP/ISO22000), and cold-chain logistics. Globally, industrial gas companies are expanding MAPAX-related capacity, including new CO₂ recovery and purification units in Europe and North America, nitrogen generation installations for meat and salad processors in the UK, Germany, Spain, and the Nordics, liquid-gas storage and distribution upgrades in the Middle East and Southeast Asia to support expanding chilled-food production, and multiple planned

on-site gas-supply partnerships with large poultry and ready-meal manufacturers in Asia-Pacific through 2025?2027; several European gas suppliers are also investing in digitalized MAPAX monitoring systems and sustainability projects using recycled CO₂ and lower-carbon air-separation technologies.2024 Global Market sales Volume: 1.5 billion cubic meters, Average Global Market Price: US\$ 0.48 per cubic meter, Market Average Gross Profit Margin: 33%.

The global Gases for Modified Atmosphere Packaging (MAPAX) market size was estimated at USD 720.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
