Report Overview

Gasketed Plate Heat Exchangers consist of a stack of individually stamped heat transfer plates made of stainless steel or titanium. The plate stack is clamped using bolts in a frame consisting of a fixed cover and a moveable cover. In a gasketed plate heat exchanger, the plates are fitted with elastomeric gaskets which seal the channels and direct the fluids into alternate channels. The plate pack is assembled between a frame plate and a pressure plate, and compressed by tightening bolts fitted between these plates.
