Abstracts

A gastric space-occupying device is a non-surgical medical tool designed to aid in weight loss by occupying space within the stomach, helping patients control their food intake and reduce body weight. Typically made from balloons or other flexible materials, the device is inserted into the stomach via endoscopy, creating a feeling of fullness and decreasing appetite during meals. Gastric space-occupying devices are particularly beneficial for obese patients who have not responded well to traditional weight loss methods, offering a lower surgical risk and shorter recovery time.

The global Gastric Space-Occupying Device market size was estimated at USD 297.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.50% during the forecast period.
