Abstracts

A gastroesophageal pH meter is a specialized medical device used to quantify acid exposure in the esophagus over an extended period, typically 24-96 hours, by measuring pH levels in real-time; it consists of a thin, flexible catheter equipped with a pH sensor that is inserted transnasally into the esophagus or, in some cases, a wireless capsule temporarily attached to the esophageal wall, transmitting data to an external recorder worn by the patient. This diagnostic tool is essential for objectively evaluating conditions such as gastroesophageal reflux disease (GERD), atypical reflux symptoms, and refractory acid-related disorders, providing clinicians with quantitative data on the frequency, duration, and severity of acid reflux episodes to guide treatment decisions, assess therapy efficacy, and determine the need for surgical intervention.

The global Gastroesophageal Ph Meter market size was estimated at USD 58.9 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.25% during the forecast period.
