## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on GDI Particulate Filter competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A GDI particulate filter is an exhaust after-treatment device designed to capture and remove fine particulate matter (PM) and soot emitted from gasoline direct injection engines, improving air quality, meeting stringent emission regulations, and enhancing environmental compliance for vehicles. The production of GDI particulate filters involves precision extrusion or molding of cordierite or silicon carbide ceramic substrates, application of washcoat layers containing catalytic materials to enhance soot oxidation, high-temperature sintering to achieve structural integrity, incorporation of metallic end caps and housings with corrosion-resistant coatings, rigorous quality assurance including porosity, backpressure, and thermal durability testing, calibration for engine-specific exhaust flow and particulate capture efficiency, automated assembly and inspection lines to ensure consistency, compliance with global emission standards, and logistics management to integrate filters into OEM and aftermarket supply chains for gasoline direct injection engines worldwide. Ongoing and planned projects include capacity expansion of GDI particulate filter production lines by leading global suppliers in Europe, North America, and Asia to meet rising demand from stringent emission standards, joint ventures between ceramic material producers and automotive OEMs for high-efficiency filters, R&D programs targeting lightweight and low-backpressure filter designs, integration of advanced catalyst coatings for passive regeneration, establishment of aftermarket supply networks in China and India, EU and U.S. government-supported programs promoting retrofitting of older vehicles with GDI filters, and collaborations to develop next-generation filters for hybrid and mild-hybrid gasoline engines with enhanced durability and emission reduction performance. 2024 Global
