Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Gel Filtration Materials competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Gel Filtration Materials are a porous material used for chromatographic separation, commonly used in gel filtration (also known as molecular sieve) chromatography, to separate molecules according to their size. It is made of polymers or polysaccharide-based materials (such as dextran, polyacrylamide or silica gel) with a certain pore size. Substances with smaller molecules can enter the pores and delay their outflow, while larger molecules are excluded and flow out preferentially, thereby achieving molecular weight separation. It is widely used in protein purification, peptide analysis and research on biomacromolecules. Sales volume in 2024 is expected to be 12,000 liters, with an average price of \$4,500 per liter.

The global Gel Filtration Materials market size was estimated at USD 54.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.00% during the forecast period.
