### Report Overview:

Gene synthesis refers to chemically synthesizing a strand of DNA base-by-base. Unlike DNA replication that occurs in cells or by Polymerase Chain Reaction (PCR), gene synthesis does not require a template strand. Rather, gene synthesis involves the step-wise addition of nucleotides to a single-stranded molecule, which then serves as a template for creation of a complementary strand. Gene synthesis is the fundamental technology upon which the field of synthetic biology has been built.

The Global Gene Synthesis Market Size was estimated at USD 406.73 million in 2023 and is projected to reach USD 874.13 million by 2029, exhibiting a CAGR of 13.60% during the forecast period.
