Report Overview

General Hole Saw is a saw blade of annular (ring) shape, whose annular kerf creates a hole in the workpiece without having to cut up the core material. It is used in a drill. Hole saws typically have a pilot drill bit (arbor) at their center to keep the saw teeth from walking. The fact that a hole saw creates the hole without needing to cut up the core often makes it preferable to twist drills or spade drills for relatively large holes (especially those larger than 25 millimeters (1.0 inch)). The same hole can be made faster and using less power.

The global General Hole Saw market size was estimated at USD 306 million in 2023 and is projected to reach USD 420.69 million by 2032, exhibiting a CAGR of 3.60% during the forecast period.
