The General Intelligent Decision-Making Service is a comprehensive service system built on technologies such as artificial intelligence, machine learning, big data analytics, and knowledge graphs. It aims to provide intelligent decision support across scenarios and industries for users in diverse fields. By collecting, cleaning, and modeling multi-source, heterogeneous data in real time, combined with algorithm optimization and rule-based reasoning, it enables deep insights into complex environments, trend prediction, and risk assessment. This enables businesses, governments, and individuals to make more scientific, accurate, and efficient decisions in strategic planning, resource allocation, risk control, and business optimization. Unlike traditional industry-specific decision systems, the Universal Intelligent Decision Service is highly adaptable and scalable, and can be widely applied in fields such as financial risk management, medical diagnostics, smart cities, supply chain management, and intelligent manufacturing, driving the transition from "experience-driven" to "data-driven" and "intelligence-driven." With increasing computing power and continuous advancements in AI algorithms, the Universal Intelligent Decision Service is evolving towards automation, self-learning, and explainability, becoming a critical infrastructure for the future smart economy and smart society. As a crucial pillar of the intelligent era, general intelligent decision-making services are becoming a core tool for businesses, governments, and individuals to make informed decisions in complex environments. They not only discover underlying patterns and trends by integrating multi-source, heterogeneous data, machine learning, and knowledge reasoning, but also enable dynamic prediction and optimization in real-time scenarios, providing more efficient and precise support for business development, risk management, and resource allocation. With the deepening of economic globalization, industrial digitization, and intelligent social governance, the demand for general intelligent decision-making services is expanding from single industries to cross-industry and multi-scenario applications, creating a vast market

potential. Going forward, providers should focus on the following areas: First, strengthen technological innovation, enhance model interpretability and adaptability, and ensure stability and reliability in diverse scenarios; second, focus on data governance and security compliance, establish comprehensive privacy protection and transparency mechanisms, and earn user trust; third, develop industry- and scenario-specific solutions, deeply integrating general capabilities with specific industry needs to create differentiated competitive advantages; and fourth, build an open ecosystem, partnering with cloud service providers, industry leaders, and research institutions to jointly promote the standardization and industrialization of intelligent decision-making. Only by making comprehensive arrangements in technology, compliance, scenario-based and ecological construction can general intelligent decision-making service providers stand out in the fierce market competition and become the key driving force in the era of intelligent economy.
