### Report Overview

General purpose contactors are designed for a broad range of applications and must be able to switch higher currents. It will have larger contact heads (to lower resistance) and wider gaps between contacts (to limit damage from arcing) than a definite purpose contactor. These features, plus other design characteristics of general purpose contactors, give them a longer operating lifetime than cheaper definite purpose contactor options. Aside from the higher cost, there is no drawback in using general purpose contactors for HVACR applications. In fact, general purpose contactors will most likely outlast any HVACR equipment they are installed in.
