Abstracts

General purpose engines, also known as small industrial engines, are internal combustion engines typically ranging from 1 to 30 horsepower and designed for versatility across a wide range of non-automotive applications, including power generation, construction equipment, agricultural machinery, water pumps, pressure washers, and outdoor power equipment such as lawn mowers and generators. These engines are characterized by their portability, durability, and ability to operate under varying environmental conditions, with common fuel types including gasoline, diesel, natural gas, and propane. The market serves both consumer and industrial segments, with demand driven by factors such as infrastructure development, agricultural modernization, emergency preparedness, and the growth of small-scale commercial activities requiring reliable, off-grid power solutions. Key technological trends include increasing emphasis on fuel efficiency, reduced emissions compliance with environmental regulations, and the integration of electric start and smart monitoring features, though the market also faces growing competition from alternative power sources such as battery-electric systems in certain applications.

The global General Purpose Engines market size was estimated at USD 6136.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.55% during the forecast period.
