Report Overview

GP resin is translucent with a slightly beige/brown tint. The next most familiar is the 'clear casting' version which cures glass-clear and colourless and is often used for the embedding of objects in clear blocks. There is also 'gel coat' resin which is pre-thickened, and opaque white resins (pre-pigmented) are also common. All are catalysed by mixing a measured amount of the same hardener (containing MEKP methyl ethyl ketone peroxide) ranging from c. 1-4% by weight.

General Purpose resin commonly used for fibreglass work in conjunction with glass matting.
