### Report Overview:

The surgical system is an advanced robotic platform designed to perform complex surgical procedures using a minimally invasive approach. When using a robot for surgery, the doctor's hands do not touch the patient. Once the incision position is determined, a robotic arm equipped with a camera and other surgical tools will perform operations such as cutting, hemostasis, and suture. The surgeon only needs to sit on the console of the operating room and observe and guide the robotic arm. It is reported that this technology allows doctors to perform surgery on patients at one end of the earth. At present, the most common robotic surgery is gradually increasing, such as bariatric surgery, Heller myotomy, gastrectomy, hernia repair, gallbladder removal Surgery, oral surgery and pancreatectomy.

The Global General Surgical Robots Market Size was estimated at USD 2569.35 million in 2023 and is projected to reach USD 3121.94 million by 2029, exhibiting a CAGR of 3.30% during the forecast period.
