Abstracts

Generative AI software refers to a class of artificial intelligence systems capable of creating new, original content?such as text, images, audio, code, and video?by learning patterns from vast datasets. These systems, which include large language models (LLMs), generative adversarial networks (GANs), and diffusion models, operate through deep learning techniques to produce outputs that mimic human creativity and reasoning. Unlike traditional AI focused on classification or prediction, generative AI synthesizes novel artifacts, making it applicable across diverse domains including content creation, software development, marketing, design, and scientific research. The technology is characterized by its ability to generate contextually relevant, high-quality outputs in response to user prompts, often with minimal human intervention.

The global Generative Ai Software market size was estimated at USD 14100.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 36.50% during the forecast period.
