Abstracts

Generative Engine Optimization (GEO) refers to a set of strategic techniques and methodologies aimed at improving the discoverability, visibility, and positioning of content within AI-generated outputs, particularly those produced by Generative AI systems like ChatGPT, Google Gemini, Claude, Perplexity, and other large language models (LLMs). Unlike traditional Search Engine Optimization (SEO) which focuses on keyword ranking within search engines like Google or Bing, GEO targets language model outputs, seeking to influence how often, how prominently, and in what phrasing content appears in AI-generated answers. GEO encompasses technical formatting, prompt engineering, language shaping, data structuring, and source authority enhancement to make content AI-readable, AI-preferred, and LLM-indexed. It is especially relevant for businesses, content creators, and digital marketers in the post-search AI era, where conversational agents play a growing role in information discovery, recommendation, and decision-making.

The global Generative Engine Optimization (GEO) Services market size was estimated at USD 886.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 34.00% during the forecast period.
