Report Overview

The telecom industry is going through a transitional shift with the huge surge in data traffic and increasing smartphone penetration. The rollout of advanced networks like 4G is adding to the data traffic, which is directly impacting the demand for strong telecom networks. On-Grid: These generators are used for backup power in case of power outages, grid failure, and emergencies like natural disasters. Off-Grid: These generators are used as primary and backup power in developing countries, rural areas, and areas with unreliable grid supply.

This industry research report identifies the expansion of rural telecom infrastructure to be one of the major factors that will have a positive impact on the growth of this market in the coming years. The capital intensive nature of the telecom industry makes it highly dependent on subscriber density, which is one of the major reasons for the under-development of the rural telecom industry. Increasing income levels and initiatives from governments will drive the expansion of telecom networks in rural areas. Since rural areas lack grid connectivity and reliability, this network expansion will in turn, drive the demand for generators from the telecom sector.
