Abstracts

Generators with CO sensors are portable or standby power generation devices equipped with carbon monoxide (CO) detection technology. These generators continuously monitor CO levels during operation and automatically shut down or trigger alarms when dangerous concentrations are detected, preventing carbon monoxide poisoning incidents. They are widely used in households, outdoor camping, construction sites, and emergency backup power applications. With increasing global safety regulations, many countries have mandated the inclusion of CO sensors in portable generators. For example, the U.S. Consumer Product Safety Commission (CPSC) has implemented regulations to enhance safety standards. In the future, as sensor technology advances and smart applications become more widespread, these generators are expected to gain broader adoption worldwide. Additionally, the integration of Internet of Things (IoT) technology may enable remote monitoring and intelligent control, further improving safety and user convenience.

The global Generators with CO Sensor market size was estimated at USD 890.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 15.00% during the forecast period.
