Abstracts

Generic allergy medicine refers to non-branded, bioequivalent versions of branded antihistamines, decongestants, corticosteroids, and other formulations used to treat allergic reactions, such as hay fever, hives, or allergic rhinitis. These products contain the same active ingredients, dosage forms, strength, and intended use as their branded counterparts but are typically sold at a lower cost after the original drug's patent has expired. They function by blocking histamine receptors or reducing inflammation to alleviate symptoms like sneezing, itching, watery eyes, and nasal congestion. The availability of generic options plays a key role in increasing accessibility and affordability for consumers managing chronic or seasonal allergies.
