### Report Overview

Generic coating is a specially formulated coating used to protect circuit boards and related equipment from environmental erosion, thereby improving and prolonging their service life and ensuring the safety and reliability of use. Under realistic conditions, such as chemical, vibration, high dust, salt spray, humidity and high temperature environments, circuit boards may have corrosion, softening, deformation, mildew and other problems, resulting in circuit board circuit failures. The three-proof paint is coated on the surface of the circuit board to form a layer of three-proof protective film (three-proof refers to moisture-proof, salt spray and mildew-proof). It can effectively isolate the circuit board and protect the circuit from erosion and damage in harsh environments, thereby improving the reliability of the circuit board, increasing its safety factor, and ensuring its service life.
