Report Overview

A genset (generator set) is used to power the reefer container when normal shore power is not available. E.g. when trucking over long distances or when chilled or sensitive cargo is being moved. The majority of the gensets are clipped on to the upper front of the reefer container (clip-on genset). Another type of genset can be attached to the standard chassis frame (underslung genset).

Inadequate power supply along with accelerated demand for reliable and continuous power will stimulate the global generator sets market size. The industry is extensively driven on account of expanding population and urbanization on a global scale.

Increasing intensity and frequency of weather-related disasters resulting in prolonged outages will further boost the product adoption.
