Abstracts

Geocomposite Drainage Net is a geotechnical material made of high-strength polyester fiber and polyethylene plastic with excellent drainage properties and pressure resistance. It is widely used in civil engineering, water conservancy engineering, environmental engineering and other fields. Its main function is drainage and reinforcement. Its three-dimensional structure allows water to be quickly discharged through the grid gaps, effectively reducing the soil moisture content and improving soil stability. At the same time, it can also withstand greater pressure, increase the pressure resistance of the soil, and prevent settlement and deformation of the soil. Further develop new materials to improve their drainage performance, compressive strength and durability to meet changing environmental conditions and application needs.

The global Geocomposite Drainage Net market size was estimated at USD 2026.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
