Abstracts

Geological Database Software is a specialized information system tool developed specifically for data management needs in the geological field. Its core function is to efficiently collect, standardize, organize, securely manage, and deeply analyze multi-source, heterogeneous geological data generated during geological exploration, mineral resource evaluation, engineering geological surveys, and hydrogeological research. This type of software can integrate and process various types of data including geological drilling data, geological profile drawings, rock and mineral specimen information, geophysical and geochemical detection data, remote sensing image data, field geological observation records, etc. By establishing standardized data models and a unified data dictionary, it can achieve consistent integration and association of geological data from different sources and in different formats, ensuring the integrity, accuracy and traceability of the data; at the same time, it usually integrates spatial data management capabilities (compatible with GIS technology), data visualization tools (such as generating geological profiles, contour maps, three-dimensional geological models, etc.) and professional analysis modules (such as mineral resource reserve estimation, geological hazard risk assessment, groundwater resource simulation, etc.), supporting geologists to quickly retrieve and query the required data, intuitively present geological phenomena and laws, and assist in scientific decision-making and research work. It is widely used in mineral resource development, geological hazard prevention and control, engineering construction geological survey, regional geological survey and other fields. It is a key technical support platform for improving geological work efficiency, promoting geological data sharing and digital transformation.

The global Geological Database Software market size was estimated at USD 325.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
