Abstracts

Geological Mapping Software is a professional tool designed specifically for geological work. Its core is to digitally support the entire geological mapping process. Deeply integrating positioning technology, it enables geologists to accurately collect, describe, and structure spatial information about geological phenomena (such as lithology, occurrence, and structure) using mobile devices in the field. In-field, the software further provides powerful data processing, multi-dimensional visualization, and spatial analysis capabilities. It can integrate multi-source data such as remote sensing, geophysics, and geochemical exploration to conduct comprehensive geological interpretation, ultimately generating digital geological maps, sections, and 3D geological models. This software is a key platform for transitioning from field observation to indoor mapping, and from 2D planes to 3D insights. It is widely used in resource exploration, engineering geology, environmental assessment, and scientific research.

The global Geological Mapping Software market size was estimated at USD 103.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
