Abstracts

Geomembrane production lines are mainly used for the continuous extrusion, calendaring, and winding of HDPE/LLDPE geomembranes, composite geomembranes, and multi-layer geomembranes. They are widely used in water conservancy projects, landfills, mine seepage prevention, and chemical storage tank corrosion protection. Demand growth is primarily driven by increased global investment in environmental governance, higher standards for mine tailings dam seepage prevention, increased reservoir/channel lining projects in developing countries, and landfill expansion driven by waste sorting. Future business opportunities focus on wider production lines (8-10m), high-speed intelligent thickness control, online visual inspection, energy-saving screw design, recyclable material compatibility processing, and extensions towards fully automated logistics conveying, digital factory integration, and multi-layer co-extrusion technology for composite membranes.

The global Geomembrane Production Line market size was estimated at USD 305.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
