## Abstracts

Geosteering software is a specialized technological tool used in the oil and gas industry that enables real-time decision-making during the drilling process. It integrates data from multiple sources such as well logs, seismic information, and measurements from downhole tools to create accurate subsurface models. These models are then analyzed to provide drillers with precise guidance on adjusting the wellbore path, allowing them to optimize the well's trajectory to stay within the desired target zones, maximize reservoir contact, and enhance hydrocarbon recovery while minimizing risks associated with drilling outside productive areas or encountering geological hazards.

The global Geosteering Software market size was estimated at USD 519.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
