Abstracts

Geothermal power plants are facilities that generate electricity by harnessing the Earth's internal heat, typically by tapping into naturally occurring hydrothermal resources such as hot water or steam reservoirs located beneath the Earth's surface; these plants utilize various technologies, including dry steam, flash steam, and binary cycle systems, to convert thermal energy into mechanical power, which then drives turbines connected to generators, producing a consistent and reliable baseload power supply that is largely independent of weather conditions.

The global Geothermal Power Plant market size was estimated at USD 97.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
