Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Geranyl Formate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Geranyl Formate production reached approximately 1,225 tons, with an average global market price of around US\$ 240 per kilogram. Geranyl Formate is an organic ester compound formed by the reaction of formic acid and geraniol, a naturally occurring monoterpene alcohol found in essential oils such as rose, citronella, and palmarosa. It has the chemical formula $C_{15}H_{26}O$ and is characterized by a sweet, fruity, and floral aroma with subtle green and citrus undertones, making it a valuable ingredient in the fragrance and flavor industries. Commonly used in perfumes, cosmetics, and food flavoring, Geranyl Formate contributes freshness and brightness to formulations, and its natural origin makes it attractive for use in products marketed as botanical or nature-inspired. The key market drivers for Geranyl Formate are its widespread use in the fragrance and flavor industries, fueled by rising consumer demand for natural and botanical ingredients in perfumes, cosmetics, personal care products, and food flavorings. Its sweet, fruity-floral profile with citrus-green notes makes it a desirable additive in fine fragrances, soaps, detergents, and household cleaners, as well as in confectionery, beverages, and other flavor applications. Growing trends toward clean-label products, sustainability, and plant-derived raw materials further support its adoption, while expanding markets in emerging economies and the premiumization of personal care and home care products also contribute to increasing demand.

The global Geranyl Formate market size was estimated at USD 294.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
