Abstracts

Germanium 68 generators are medical devices used in nuclear medicine to produce gallium-68, a positron-emitting radionuclide, through the decay of germanium-68; these generators serve as on-site sources for radiolabeling compounds used in positron emission tomography (PET) imaging, particularly for diagnostic applications in oncology, neurology, and cardiology, enabling procedures such as Ga-68 DOTATATE PET scans for neuroendocrine tumor detection. The market for these generators is driven by the expanding use of PET imaging, advancements in radiopharmaceuticals, and the growing prevalence of cancer and neurological disorders, though it faces challenges related to regulatory hurdles, the need for specialized handling due to radioactivity, and competition from alternative radioisotope production methods. Geographically, demand is concentrated in regions with well-established healthcare infrastructure and high adoption of nuclear medicine, such as North America, Europe, and parts of Asia-Pacific, with key market players focusing on improving generator efficiency, shelf-life, and compliance with stringent safety standards.

The global Germanium 68 Generators market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
