## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Germanium Sesquioxide competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Germanium Sesquioxide (chemical formula:  $\text{Ge}_2\text{O}_3$ ) is an inorganic compound composed of germanium and oxygen, where germanium exhibits a +3 oxidation state. It is a white to off-white powder that is sparingly soluble in water and stable under normal conditions. Often referred to as organic germanium when used in dietary supplements (in its derivative forms such as Ge-132), germanium sesquioxide is distinct from toxic germanium dioxide ( $\text{GeO}_2$ ) and is known for its low toxicity profile. In industrial and pharmaceutical contexts, germanium sesquioxide is synthesized through controlled oxidation of elemental germanium or as an intermediate during purification processes of germanium compounds. While not a widespread industrial material due to high cost and limited sourcing, it is commonly used in alternative medicine, with claimed (but scientifically debated) benefits for immune support, detoxification, and anti-tumor activity.

The global Germanium Sesquioxide market size was estimated at USD 147.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
