## Abstracts

Gesture control software is a software program that can recognize and analyze user gestures and perform corresponding operations or functions based on these gestures. It mainly relies on computer vision, sensor technology and machine learning algorithms to achieve this. The user's hand movements are captured by the camera and converted into image data. Then, the image recognition algorithm is used to analyze and extract the shape, position, movement trajectory and other features of the hand. Or with the help of sensors such as accelerometers and gyroscopes, the movement state and direction changes of the hand are sensed to obtain dynamic information of the gesture.

The global Gesture Control Software market size was estimated at USD 1562.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.40% during the forecast period.
