## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Getter for Vacuum Insulation Plate (VIP) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Vacuum insulation panel (VIP) is a high-performance insulation material widely used in fields such as construction, cold chain, and home appliances. Getter is one of the core materials of VIP, used to maintain vacuum and adsorb residual gases (such as H<sub>2</sub>O, O<sub>2</sub>, N<sub>2</sub>, etc.), thereby extending the service life of VIP. During the use of VIP, gas and moisture will slowly penetrate into the vacuum inside the board through the barrier film, causing the pressure inside the board to gradually increase and affecting the service life of VIP. Therefore, it is necessary to add a suction agent inside the VIP to Getter and moisture and delay the aging process of VIP. In 2024, global Getter For Vacuum Insulation Plate (VIP) production reached approximately 2889K units, with an average global market price of around US\$ 27 per unit.

The global Getter for Vacuum Insulation Plate (VIP) market size was estimated at USD 78.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
