The price of getters for vacuum electronic devices is approximately US\$15-20 per unit, and global sales in 2024 are expected to be approximately 20 million units. The price of getters for vacuum electronic devices is about US\$15-20 per piece, and the sales volume is about 20 million pieces. A getter for vacuum electronic devices is a critical functional material designed to maintain the high internal vacuum level after the device is sealed. Its primary function is to chemically adsorb or react with residual gases or those released during operation (such as oxygen, nitrogen, hydrogen, water vapor, carbon monoxide, etc.), effectively removing these harmful gases. This process prevents gas molecules from ionizing, reacting with the cathode, or causing electrical breakdown, thereby ensuring the device's performance, stability, and longevity. Getters are mainly categorized into two types: evaporable getters (e.g., barium-aluminum, which are heated to evaporate and form a mirror-like coating) and non-evaporable getters (NEG, e.g., zirconium-aluminum alloy, which absorb gases directly after being activated by heating).

The global Getters for Vacuum Electronic Devices market size was estimated at USD 355.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
