Abstracts

Gigabit Ethernet switches are networking devices that connect multiple devices on a local area network (LAN) and use the Ethernet standard to transmit data at speeds of up to 1 gigabit per second (Gbps), operating primarily at Layer 2 (data link layer) of the OSI model, though many modern switches also incorporate Layer 3 (network layer) features such as routing. These switches intelligently manage data traffic by using MAC addresses to forward frames only to the intended recipient port, enhancing network efficiency, reducing collisions, and improving overall bandwidth utilization compared to older hubs. They typically support auto-negotiation for speed and duplex settings, Power over Ethernet (PoE) options for devices like IP phones and cameras, and may include features like VLANs, Quality of Service (QoS), and management capabilities ranging from unmanaged plug-and-play models to fully managed switches with advanced configurability.

The global Gigabit Ethernet Switches market size was estimated at USD 7842.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
