Abstracts

Ginseng is the root of plants in the genus *Panax*, such as Korean ginseng (*P. ginseng*), South China ginseng (*P. notoginseng*), and American ginseng (*P. quinquefolius*), characterized by the presence of ginsenosides and gintonin. Ginseng is common in the cuisines and medicines of China and Korea. Ginseng has been used in traditional medicine over centuries, though modern clinical research is inconclusive about its medical effectiveness. There is no substantial evidence that ginseng is effective for treating any medical condition and it has not been approved by the US Food and Drug Administration (FDA) as a prescription drug. Although ginseng is sold as a dietary supplement, inconsistent manufacturing practices for supplements have led to analyses of some ginseng products contaminated with toxic metals or unrelated filler compounds, and its excessive use may have adverse effects or untoward interactions with prescription drugs.

The global Ginseng market size was estimated at USD 8249.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.60% during the forecast period.
