Abstracts

Glass antifungal agents are specialized chemical formulations designed to inhibit or eliminate the growth of fungi, mold, and mildew on glass surfaces, primarily in environments with persistent moisture, poor ventilation, or high humidity. These products typically incorporate active ingredients such as quaternary ammonium compounds, silver ions, or specific synthetic biocides that disrupt fungal cell membranes or metabolic processes, thereby preventing spore germination and biofilm formation. They are applied as coatings, sprays, or additives during glass manufacturing or post-installation, offering properties like transparency, durability, and compatibility with glass without compromising optical clarity. Key functional attributes include long-lasting protection, water resistance, and the ability to maintain hygiene in applications ranging from bathroom enclosures and window seals to medical facilities, food processing areas, and greenhouse panels, where microbial growth could pose aesthetic, structural, or health risks.

The global Glass Antifungal Agent market size was estimated at USD 280.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
