Report Overview

Glass beads for sandblasting, also known as abrasive glass beads, are spherical beads made from soda-lime glass used as a blasting media in sandblasting or shot blasting processes. These beads are typically spherical in shape and have a smooth surface. Glass beads are used to clean, deburr, and improve the surface finish of various materials, such as metal, plastic, or wood. When propelled with compressed air or centrifugal force, the glass beads impact the surface being blasted, removing contaminants, coatings, or imperfections without causing significant damage. They provide a gentle abrasion, leaving a smoother surface compared to other blasting media, making them suitable for delicate or sensitive materials.

The global Glass Beads For Sandblasting market size was estimated at USD 185.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
