Abstracts

Glass beams rooflights are a specialized glazing system that integrates structural glass beams with insulated glass panels to create expansive, frameless overhead glazing solutions, primarily used in flat or low-pitch roof applications to maximize natural daylight penetration while maintaining thermal performance and weather resistance. These systems are engineered to support significant loads, often spanning large distances without the need for visible supporting frameworks, making them ideal for architectural projects seeking a sleek, modern aesthetic with an emphasis on transparency and spatial continuity. The integration typically involves the use of toughened or laminated safety glass for both beams and infill panels, combined with high-performance seals and thermal breaks to meet building regulations for energy efficiency, safety, and comfort in commercial, residential, and public buildings.

The global Glass Beams Rooflights market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
